

Leakage-controlled closed-vocabulary fragment replacement ranking

A One query, many candidates

q = (old fragment, attachment signature)

multi-positive ranking

closed vocabulary

c1
c2 * true
c3
...
c149 * true
c150
candidate fragments

ranked list

1
2 *
3 Top-10 window
...
10

hit if any true replacement appears in top 10

closed vocabulary

train-derived replacement set

no open-vocabulary generation

B Random split risk

Random split

train: (old A, sigma1)

test: (old A, sigma1)

same transform

leakage risk

C Transform-heldout protocol

Transform-heldout

train transforms

T1 T2 T3

blind transforms

U1 U2 U3

zero (old fragment, sigma) overlap

no shared transform identity

D Evaluation tiers

Train

build vocabulary

Development/
calibration

tune protocol only

Secondary blind

primary claim

Canonical analysis

robustness/mechanism only

no blind tuning
